Opening Quiz – Question #1

The U.S. stock markets had a terrible 2022. But that was just 1 year. If you had invested \$1,000 in the S&P 500 at the beginning of 2021 (2 years years ago), how much would that \$1,000 be worth today?

A. \$557

B. \$755

C. \$1,058

D. \$3,149

Opening Quiz – Question #1

The U.S. stock markets had a terrible 2022. But that was just 1 year. If you had invested \$1,000 in the S&P 500 at the beginning of 2021 (2 years years ago), how much would that \$1,000 be worth today?

A. \$557

B. \$755

C. \$1,058

D. \$3,149

Opening Quiz – Question #2

The U.S. stock markets had a terrible 2022. But that was just 1 year. If you had invested \$1,000 in the S&P 500 *at the beginning of 2013 (10 years ago)*, how much would that \$1,000 be worth today?

A. \$557

B. \$755

C. \$1,058

D. \$3,149

Opening Quiz – Question #2

The U.S. stock markets had a terrible 2022. But that was just 1 year. If you had invested \$1,000 in the S&P 500 *at the beginning of 2013 (10 years ago)*, how much would that \$1,000 be worth today?

A. \$557

B. \$755

C. \$1,058

D. \$3,149

That's an average annual return of 12% of over 10 years.

Opening Quiz – Question #3

Which of these 4 countries currently has the highest inflation rate?

United States

England

Germany

Mexico

Opening Quiz – Question #3

Which of these 4 countries currently has the highest inflation rate?

United States

England

Germany

Mexico

Opening Quiz – Question #4

Which of these 4 countries
currently has the LOWEST inflation rate?

United States

England

Germany

Mexico

Opening Quiz – Question #4

Which of these 4 countries
currently has the LOWEST inflation rate?

United States (6.5%)

England (10.2%)

Germany (8.6%)

Mexico (7.8%)

Opening Quiz – Question #5

If you sold cookies out of your apartment during 2022 and made \$500 from those sales, and spent \$200 making those cookies, what do you owe taxes on?

\$500

\$300

\$200

\$0

Opening Quiz – Question #5

If you sold cookies out of your apartment during 2022 and made \$500 from those sales, and spent \$200 making those cookies, what do you owe taxes on?

\$500

\$300

\$200

\$0

Opening Quiz – Question #6

If you spend \$2,500 (or more) on education expenses that are required for your degree – including tuition, books, supplies, maybe a computer – you might be able to receive a \$2,500 credit on your tax return.

TRUE

FALSE

Opening Quiz – Question #6

If you spend \$2,500 (or more) on education expenses that are required for your degree – including tuition, books, supplies, maybe a computer – you might be able to receive a \$2,500 credit on your tax return.

TRUE

FALSE

Check out the *American Opportunity Tax Credit* (up to \$2,500) and the *Lifetime Learning Credit* (up to \$2,000) to see if you are eligible for either credit.

Credits directly reduce the taxes you owe...which is really nice.

Opening Quiz – Question #7 – Last One

If I had invested \$1,000 into the S&P 500, the overall U.S. stock market, on the day that I was born, how much would that be worth today?

A. \$1,000

B. \$12,257

C. \$43,656

C. \$85,035

Opening Quiz – Question #7 – Last One

If I had invested \$1,000 into the S&P 500, the overall U.S. stock market, on the day that I was born, how much would that be worth today?

A. \$1,000

B. \$12,257

C. \$43,656

That's an annual return of just over 10% per year.

C. \$85,035

A Few Opening Morals

Personal Finance is...personal.

It's about you and not about anyone else.

You have to make it about you and your goals.

A Few Opening Morals

There is no judgment in personal finance.

There is no ego in personal finance.

There is no shame in personal finance.

It's about you and not about anyone else.

A Few Opening Morals

Because personal finance is personal, it is virtually impossible for me to give you any specific advice.

However, there is one word of advice that applies to 99% of people working on their finances:

SAVE

A Few Opening Morals

SAVINGS

INVESTING

OWNERSHIP

WEALTH

A Few Opening Morals

The average NBA player makes \$8.3 million per year and plays for 4.5 years. Within 5 years of retirement, 60% of NBA players are broke.

When LeBron James joined the Los Angeles Lakers, he talked with Magic Johnson about his future, about his legacy and about business opportunities.

Magic's advice was simple: to build enormous wealth, you have to be an owner.

Owning Your Financial Future

Question #1

What are you going to be doing in 2030?

Are you in college? Graduate school? If so, what are you studying?

Are you working? If so, what is your job?

Where do you live? Who do you live with?

How do you spend your free time?

Owning Your Financial Future

Question #2

What are the 3 most expensive things you plan on buying in the next 10 years.

Maybe it's your undergraduate education.

Maybe it's eventually graduate school.

Or maybe it's a house, a car, a vacation, a baby, a new pair of shoes. Anything.

Owning Your Financial Future

Question #2

What are the 3 most expensive things you plan on buying in the next 10 years.

We do these thought exercises to begin thinking about how we might make it happen. Yes, we are just making things up in our responses – but that's where planning begins.

For most of us who aren't named Magic or Lebron, owing our financial futures begins with identifying our goals and designing a plan to achieve those goals.

What is INVESTING?

Investing is saving for the future.

- We typically think of investing as long-term – anywhere from 1 or 2 years all the way through retirement.
- Saving vs. Investing
 - Saving can be short-term, Investing is typically long-term.
 - Saving is passive, Investing is dedicated...it could be relatively passive or extremely active.
 - Passive: Mutual funds. Extremely Active: Owning an apartment complex.
 - Saving is typically very low risk, Investing generally has more risk.
 - Saving provides low returns on investment (currently about 0.0%)
Inflation is risky...You can lose 100% or realize huge positive returns.

What Is Your Investing Goal?

Take a few seconds to ask yourself:

Why Are You Investing?

What are your investing goals?

To buy a house?

To buy a car?

To pay off debt?

To retire?

A Few Rules About INVESTING

- Investing is about Trade-Offs. Using money today to get (hopefully more) money in the future:

#1 Which would you rather we give you:

- (A) \$100 in cash today
- (B) \$100 in cash in 12 months

#2 Which would you rather we give you:

- (A) \$100 in cash today
- (B) \$500 in cash in 12 months

#3 Which would you rather we give you:

- (A) \$100 in cash today
- (B) \$120 in cash in 12 months

A Few Rules About INVESTING

- Risk matters. Know your risk tolerance.
- Goals matter. Be intentional about what you are saving for.
 - Maybe create 3-5 different investment accounts for different goals.
 - This is what I do – I'll show you why in a bit.
- Transaction costs matter. You can pay a lot of fees for not much benefit or service. Be careful.
- Experts rarely have tips or secrets. Investing is about predicting the future, and none of us can predict the future (perfectly). Be careful.
 - If there really were sure-things or get-rich-quick schemes, the experts would be using them themselves, not sharing them with you.
- Communicate with your family. Achieving goals is a family affair.

A Few Rules About INVESTING

- Investing lets **COMPOUND INTEREST** be your friend.
 - With compound interest, your interest earns interest.
 - Without actively making decisions, your money can grow exponentially.
- Yes, there is risk – the exponential growth rate could be negative.
- Such risk is greatest if you ‘invest’ over very short periods of time.
- Historically, over the past 100+ years, if you invest for 5+ years, you have benefited from positive exponential growth.
- The average return of a common stock over the past 100 years is 10%.
 - The word ‘average’ is very important here. But, the good news, we can all achieve ‘average’ returns relatively easily (though they may not be 10% in the future)

A Few Rules About INVESTING

- Investing lets **COMPOUND INTEREST** be your friend.
 - Invest \$100 at 10% interest or growth:
 - Year 1: $\$100 \times (1 + 10\%) = \110
 - Year 2: $\$110 \times (1 + 10\%) = \121
 $\$100 \times (1 + 10\%)^2 = \121
 - Year 1: \$10 of interest
 - Year 2: \$10 of interest on your original \$100
+ \$1 of interest on year 1 interest

- **January 27 to February 18**
- **February 18 to today**

GAMESTOP From January 2020 to Today

+4000%

If you had invested \$100 in Gamestop at the beginning of 2020, that investment would be worth \$5000 today.

Timing Matters

- We could tell similar stories about ups-and-downs for Bitcoin, Tesla, Dogecoin, AMC, Viacom and many other investments
- It is very, very, very, very, very, very, very, very, very, very, difficult to consistently have perfect timing when making investments
 - People who research this phenomenon for a living will tell you it's impossible
- Do you think you're unique and that you will be able to consistently time the market so you gain from the up moves and never lose from the down moves?

Expertise Matters

- Take a minute to think about the following question:

What do YOU do better than 99.9% of humanity?

- Think about what you're studying. Think about what you've been working on for years. Think about what you know that I do not know.
- I've probably only spent 1-2 hours studying what you have dedicated your life to studying and becoming an expert in.
- Could I do your job as well as you do it?

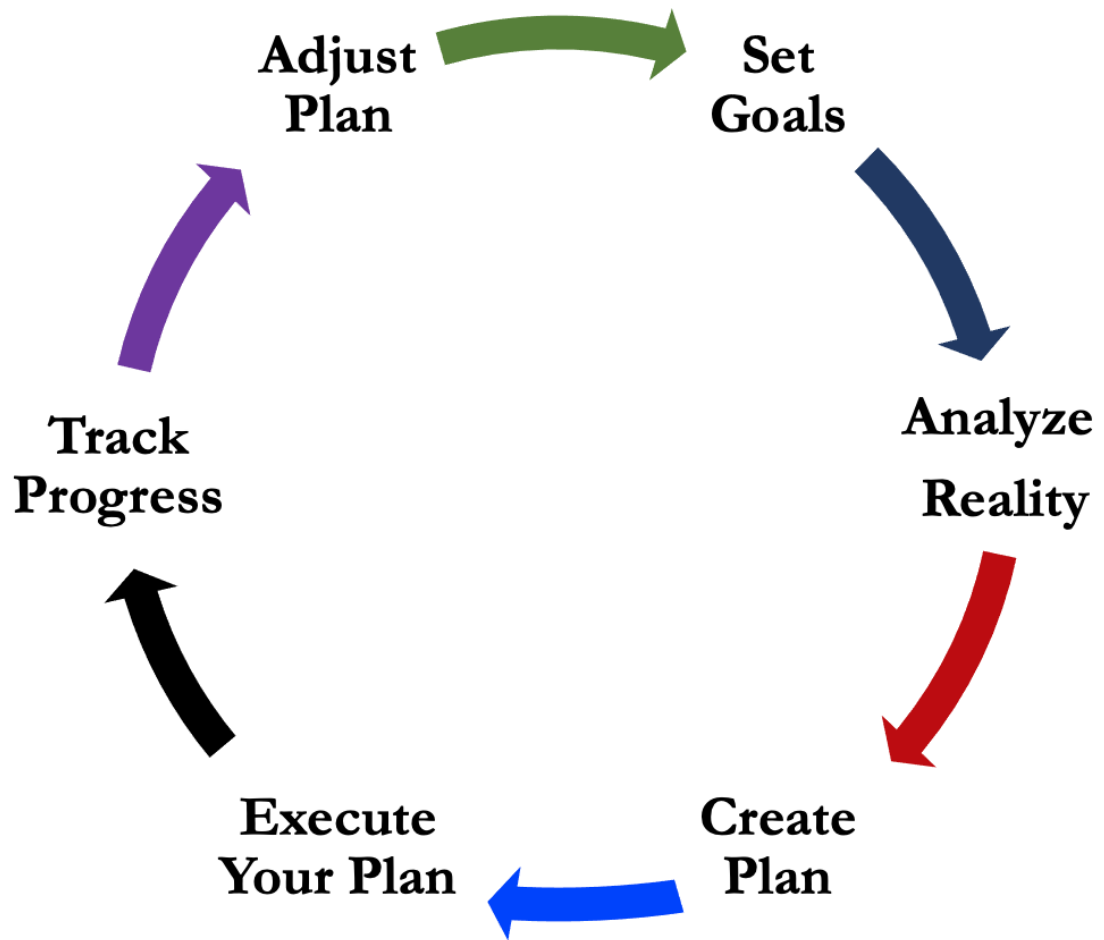

Expertise Matters

- Of course, I couldn't do your job as well as you.
- Now connect this logic to investing: there are many professionals who have dedicated their lives to making investments. They are good.
 - Yes, there are many amateurs involved in trading stocks – but they (usually) account for a very minor portion of the total money invested.
- Remind yourself of this old gambling maxim:

When you are sitting at the poker or gambling table, take a look around and see if you can figure out who the sucker is. If you cannot identify who the sucker is, then the sucker is probably you.

1. **Set your goals.** What do you want to achieve in life? What financial goals will make this happen?
2. **Analyze your reality.** What is your situation? What is your income? What are your expenses? When can you achieve your goals?
3. **Create your plan.** Focus on the short-term – the next 3-6 months – and the long-term – the next 1, 2, 5 and 10 years.
4. **Execute your plan.** Work to decrease your expenses. and to pay off debt. Work to increase your income and your savings.
5. **Track your progress.** How are you doing? Are you ahead of your goals? Are you behind your goals?
6. **Adjust your plan** to reflect your progress, your new reality and any new goals.
7. **Repeat. Revise. Enjoy.**

Isn't this a lot like what you do with your education planning?

Determining Your Risk Tolerance

High Risk Attitude

I want to summer in Paris and winter in Hawaii

Medium-High Risk Attitude

I will work through normal retirement age, but I want my spouse to retire early - and we want to visit Paris & Hawaii

Medium-Low Risk Attitude

I want my children to have a college education

Low Risk Attitude

I want food on the table and a roof over my head

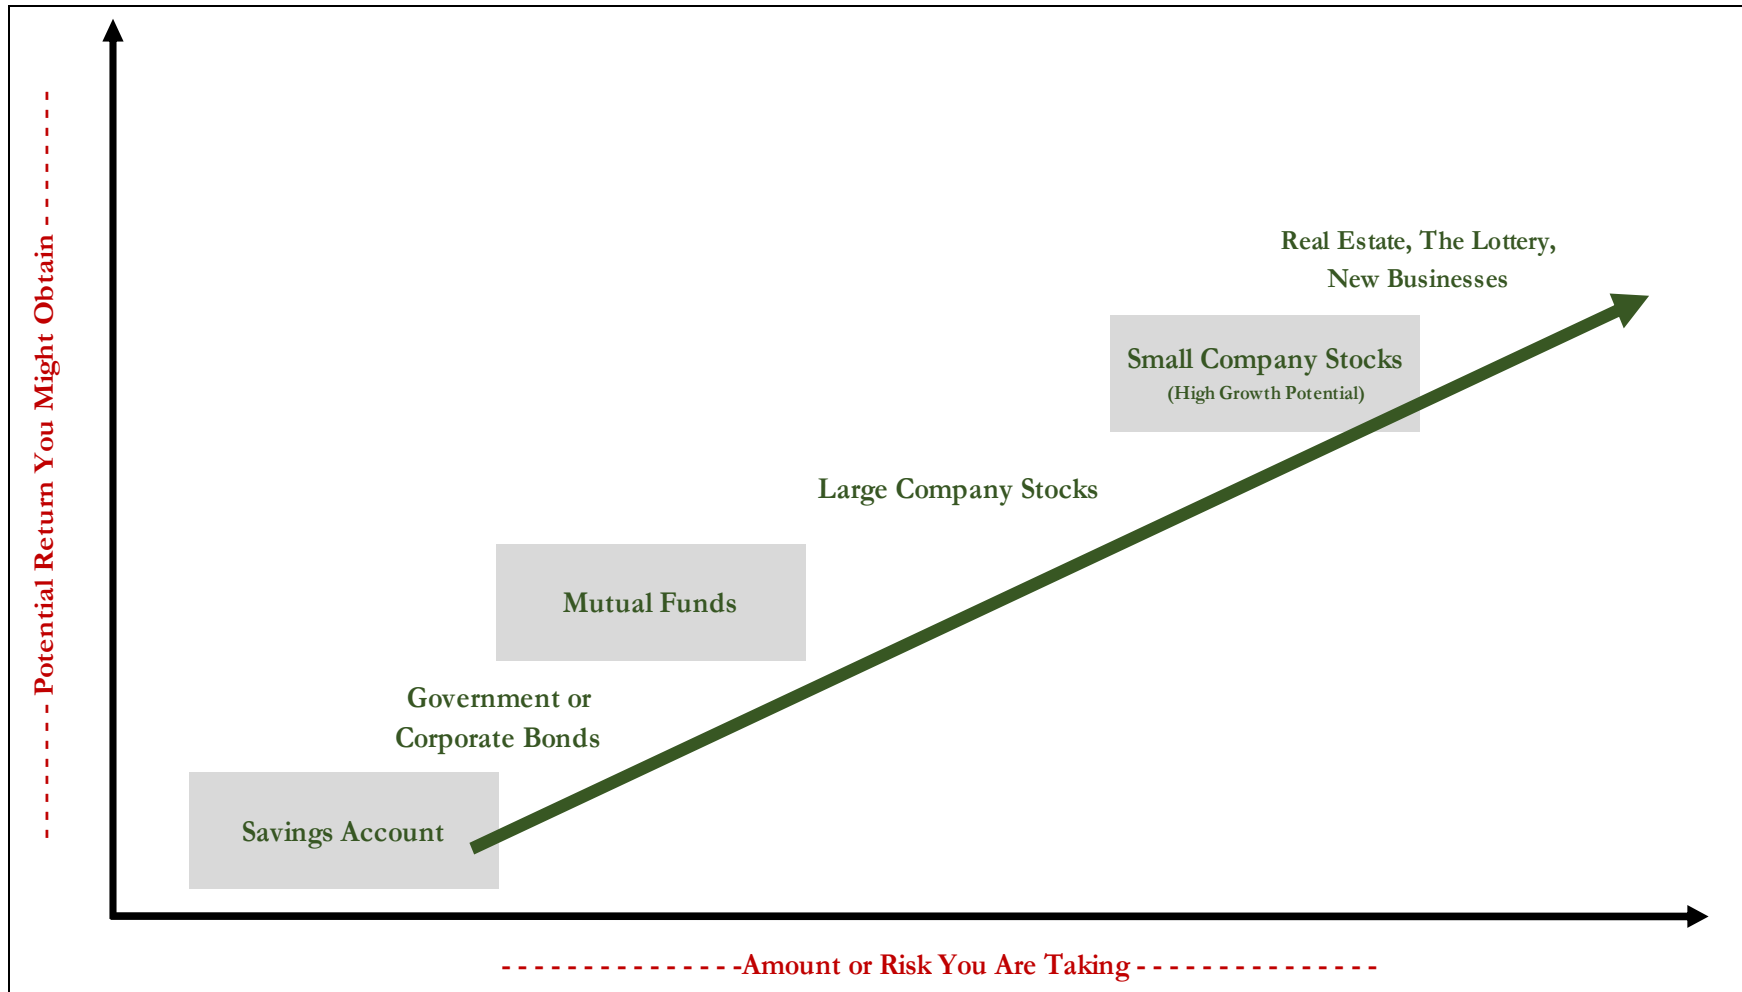

Determining Your Risk Tolerance

Global Portfolio Allocation Scoring System (PASS) for Individual Investors					
	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
Earning a high long-term total return that will allow my investments to grow faster than the inflation rate is one of my most important objectives.	5	4	3	2	1
I would like an investment that provides me with an opportunity to defer paying taxes on any gains far into the future.	5	4	3	2	1
I do not need my investments to provide a large amount of current income.	5	4	3	2	1
I am willing to tolerate some sharp down-swings on my investments in order to seek a potentially higher return than would normally be expected from more stable investments.	5	4	3	2	1
I am willing to risk a short-term loss in return for a potentially higher long-run rate of return.	5	4	3	2	1
I am financially able to accept a low level of liquidity in my portfolio; I can wait for several years before needing cash from my investments.	5	4	3	2	1

Comparing Different Investments

Comparing Different Investments

What Investment Options Are Available to You?			
Type of Investment	Potential Return	Amount of Risk	Comments
Stocks - Large Companies with reliable income	Moderate - Historically 5-8% per year	Moderate. Losses are possible, but should be temporary	Good for long-term investors. Might provide regular income, which you would pay taxes on.
Stocks - Large Companies with less reliable income	Moderate - Historically 7-10% per year	Moderately High. Pretty big losses are possible, but should be temporary	Good for long-term investors. Probably do not provide regular income - you only get income when you sell.
Stocks - Smaller Companies with high potential for growth	High - Historically 10-12% per year	High. Pretty big losses are possible, but should be temporary	Good for long-term investors. Probably do not provide regular income - you only get income when you sell.
Bonds - Corporate	Moderate - Historically 3-6% per year	Moderately low. Losses are unlikely.	Good for long-term investors. Will provide regular income, which you would pay taxes on.
Bonds - Government	Moderate - Historically 1-5% per year	Low. Losses are unlikely. You will get your money back.	Good for short- and long-term investors. Will provide regular income, but you won't pay taxes.
Mutual Funds - Either Stocks or Bonds	Moderate - Could be as low as 3-4% or over 10%.	Moderate. Huge gains are unlikely, losing everything is unlikely.	Mutual funds pool money to make lots of investments; your risk is lower but won't own any specific company.
Real Estate	Who knows? Nobody knows.	Very High. Be prepared for anything.	Very sensitive to the overall economy. And the entry price can be very high.
Yourself + Your Education	Enormous	Very low if you work hard. Very high if you're lazy.	Without question, the best investment you can make. You get to determine how much this investment pays off.
The Lottery	Negative	Very High	See the next Chapter - You should expect to lose all of your money.

The Magic of Compound Returns

Quiz Question on Compound Returns:

- Under which of the following scenarios will you have more money saved when you turn 65?
 - (A) Investing \$100 per month from age 25-35 (and then nothing from 35-65)
 - (B) Investing \$100 per month from age 35-65 (but nothing from 25-35)

The Magic of Compound Returns

Quiz Question on Compound Returns:

- Under which of the following scenarios will you have more money saved when you turn 65?
 - (A) Investing \$100 per month from age 25-35 (and then nothing from 35-65)
With an 8% return, you will have \$185,000 accumulated at 65.
 - (B) Investing \$100 per month from age 35-65 (but nothing from 25-35)
With an 8% return, you will have \$150,000 accumulated at 65.

Note: If the returns on your investments are less than 6%, (B) will lead to greater wealth.

There's a similar but different problem on page 37 of your handbook.

Review: A Few Rules About INVESTING

- Investing lets **COMPOUND INTEREST** be your friend.
 - With compound interest, your interest earns interest.
 - Without actively making decisions, your money can grow exponentially.
- Yes, there is risk – the exponential growth rate could be negative.
- Such risk is greatest if you ‘invest’ over very short periods of time.
- Historically, over the past 100+ years, if you invest for 5+ years, you have benefited from positive exponential growth.
- The average return of a common stock over the past 100 years is 10%.
 - The word ‘average’ is very important here. But, the good news, we can all achieve ‘average’ returns relatively easily (though they may not be 10% in the future)

Review: A Few Rules About INVESTING

- Investing lets **COMPOUND INTEREST** be your friend

Not to be too esoteric or philosophical...

But compound interest doesn't just apply to investing.

Compound interest applies to all aspects of college life:

- Time Management
- Mental Health
- Health Management
- Writing Skills
- Relationships
- And...Of course, Money Management

Investing – Some Perspective

- I am biased because I am a finance professor. I study investing and I teach investing. My perspective on risk may be meaningless to you.
- Do not take my advice on what level of risk you should take. Be thoughtful, be prudent.
- Avoid doing things that you know are stupid and that you know will cause you stress.
- But don't be afraid of taking risks just because they scare you. You have already taken many, many risks in your life. Taking informed and measured risks will continue to open many doors and opportunities for you – in both your personal and financial lives.

Common Questions about Investing & Saving

How can I save when my income is so low as a student?

My problem isn't budgeting but it's having too little income.

- Your short-term priorities while in grad school need to be your education, your family and your mental health.
- Maybe saving cannot be a priority for you while you're in school.
- The goal is to develop habits and a mindset that will prepare you to maximize the benefits of saving when your income allows you to do so. Be patient. The benefits of good habits will grow exponentially.

Common Questions about Investing & Saving

How can I save when my income is so low as a student?

My problem isn't budgeting but it's having too little income.

- And think of ways to generate more money: gigs, internships, tutor, lab assistant, freelance positions, blogger, podcasts, consulting
 - Create new jobs for yourself: maybe sell your skills in social media marketing to a company you want to work for, regardless of your program
- A lot of the advice we think of in budgeting is about “reducing expenses.” And that’s because we generally have more control over our expenses than we do over our income, at least in the short-term. Do what you can.
 - And, decreasing expenses can feel like an increase income. Same same.

Common Questions about Investing & Saving

How much of my income should I be saving each month?

- Only you can answer this. Nobody can answer it for you.
- It depends on:
 - What your goals are, both short- and medium-term.
 - What your immediate expenses are.
- I frequently advise students to save \$25 of every paycheck as soon as they receive each paycheck. Save or set aside as much as you can.
 - When I was getting my Master degree, I had no income. I was living off a little savings and a lot of debt. But I intentionally saved \$10 to \$25 on the first day of each month...simply to develop the habit.
 - In school, the habit is more important than the amount.

Common Questions about Investing & Saving

How much of my income should I be saving each month?

My challenge to you:

Take \$10 of every paycheck and move it into a savings account.
If you can save more, do it.

But at a minimum, save \$10 of every paycheck to develop the habit.

My advanced challenge to you:

Take half of what you save each month and invest it in the stock market.

Common Questions about Investing & Saving

How do I save for a big purchase – house, car, etc...?

- Start by asking yourself a few questions:
 - How much do I need to save?
 - When am I going to make this purchase?
 - Is this essential or discretionary? (A refrigerator or car vs. a vacation)
- These questions will help identify timing and priority.
 - Knowing timing & priority will help determine how you save.
 - Do you use a bank savings account or do you have time to invest in the stock market?

Common Questions about Investing & Saving

How do I save for a big purchase – house, car, etc...?

- I would explicitly allocate some of my monthly savings to this purchase.
 - I have already penciled in my holiday gift purchases – even though I won't make them for 2 months.
- We will talk about my 5 buckets for saving-investing in a few slides.
- If it's a really big purchase (e.g. house), you could even set up a dedicated saving or investing account just for that purchase.

MONTHLY BUDGET	EXAMPLE	THIS MONTH
INCOME		
Job #1 -	\$ 1,200.00	
Job #2 -	250.00	
Job #2 -	100.00	
Other -	50.00	
Other -	-	
Other -	-	
TOTAL INCOME	\$ 1,600.00	
EXPENSES		
Savings - General	\$ 50.00	
Savings - New Car, in 2023	125.00	
Savings - New House, in 2026	250.00	
Rent or Housing	400.00	
School - Tuition & Fees	150.00	
School Supplies	50.00	
Phone Bill	100.00	
Insurance - Car	100.00	
Insurance - Home	25.00	
Insurance - Health	-	
Food - Grocery	200.00	
Food - Restaurants	50.00	

Common Questions about Investing & Saving

How do I save for a big purchase – house, car, etc...?

- I would explicitly allocate some of my monthly savings to this purchase

These budgeting templates are in the handbook on pages 24-25.

You can download them from the MCOBA website, search for “Personal Financial Planning.”

Or you can email me and I will send them to you.

- You could even set up a dedicated saving or investing account just for that purchase.

MONTHLY BUDGET	EXAMPLE	THIS MONTH
INCOME		
Job #1 -	\$ 1,200.00	
Job #2 -	250.00	
Job #2 -	100.00

Food - Restaurants	50.00	

Common Questions about Investing & Saving

How much of my income should I be investing each month?

- Again, only you can answer this. Nobody can answer this for you.
- Your goals, values and resources are unique to you...and only you.
- You may read reports about how much you should have saved by a certain age or whatever.
 - It's okay to read those, but be sure to put them into your own perspective.
 - Those articles do not know what your goals are, do not know that you are in graduate school and do not know what your future plans are.
 - It is important to have a plan – but it is critical that that plan is unique to you and your situation.

Common Questions about Investing & Saving

What is a useful way to use different accounts to achieve different goals?

Me? I have 4-5 bank and investing accounts.

1. A basic checking & transactions account. My paycheck is deposited here. And all bills are paid out of this account.
2. A savings account. This is dedicated to short-to-medium term goals, such as paying down debt or paying for a vacation.
3. An investment account. This is dedicated to long term goals, such as buying a house, children's education or even retirement.
4. And 2 retirement accounts: 1 through work and 1 that I manage outside of my work retirement account.

Common Questions about Investing & Saving

Common Questions about Investing & Saving

What is a useful way to use different accounts to achieve different goals?

I have 4-5 bank and investing accounts.

Why does this work?

Research has found that humans engage in “mental budgeting.”

Imagine that you have \$10,000.

You might manage (or spend) this \$10,000 differently if you have it one account for “My Money” versus having \$2,000 in a checking account + \$8,000 in different savings & investment accounts.

Common Questions about Investing & Saving

Why does this work?

- Because it allows me to align different goals with different accounts.

Checking &
Transaction Account

No risk,
0.0% return,
all cash

Short-to-Medium
Term Goals

Some risk,
0-3% return goals,
cash + savings

Long-Term

One Rule About BUDGETING

Budgeting is philosophically very easy but practically very difficult because there is just one basic rule that applies to Budgeting:

Spend less than you earn.

- Of course, this is much easier said than done...Especially for students with limited income and fixed expenses.
- If you spend more than you earn, you have to make up the difference somehow - student loans, credit cards, savings.
 - And this borrowing will set your goals back when it comes time to repay this borrowing. You are borrowing from your future.

How Do You Succeed at Budgeting

- Be intentional. Know what you're spending. Know what your income is.
- Look in the mirror. Analyze yourself.
 - This can be painful. You may see some habits you do not like. But recognizing those habits is the first step to correcting them.
- Think both short-term and long-term.
 - At its core, budgeting is about balancing monthly income and expenses.
 - But, be sure to connect your income and expenses to your long-term goals.
- When I was in grad school, my priority was my degree. I ate more Top Ramen than any human should ever eat (including every night for a month, as part of a bet). To me, this was a choice and a habit that was critical to fulfilling my goal – my degree.

How Do You Succeed at Budgeting

I do not want all of my life to be controlled by a budget.

I simply want my budget to be functional.

~ Quote from one of your student colleagues this summer

How Do You Succeed at Budgeting

I simply want my budget to be functional.

- You want a budget to be a guide, not a rulebook.
- You want a budget that is designed for you and nobody else.
- You want to identify what is most important to you.
 - Yes, you may have to change behavior and make sacrifices – so make sure you are only sacrificing those expenses or parts of your financial life that are least important to you.

Owning Your Financial Future

Turn to page 22 in your Personal Financial Planning handbook.

There are 42 suggestions for ways to save money on page 22.

How many of these could you do over the next 3 months?

Are there any other ideas you have that should be on this list?

Owning Your Financial Future

How many of these could you do over the next 3 months?

Move to a better bank account

Give up your television

Give up a subscription

Sign up for free customer loyalty programs

Always make a shopping list

Stop eating out

Shop at a thrift store

Shop at a yard sale

Stop buying new video games

Cut your coffee purchases in half

Drink more water

Avoid convenience stores

Avoid fast food

Avoid alcohol

Quit smoking

Buy food and staples in bulk

Make a gift for friend or family member

No online purchases

Cancel unused memberships

Share your dreams with a close friend

Shop for new car insurance

Spend your free time volunteering

Avoid the mall

Only walk to places within 1 mile

Cancel magazine subscriptions

Eat breakfast

Eat leftovers

Bring your lunch to work or school

Only go to free entertainment events

Take public transportation

Carpool

Pack food for road trips

Eliminate cell phone services

Eliminate cable services

Spend 10 hours a week at the library

Learn about employee offers at work

Only drive within 3 MPH of the speed limit

Drive a different route to work

Eat less meat

Use coupons

Exercise more

Pay bills online through your bank

Owning Your Financial Future

How many of these could you do over the next 3 months?

Move to a better bank account

Quit smoking

Only go to free entertainment events

Give up your television

Buy food and staples in bulk

Take public transportation

Give up a subscription

Focus on habits, not just dollars.

Sign up for free customer services

Use library services

Use free carpooling services

Always make a budget

Use free services

Stop eating out

Use free services

Shop at a thrift store

Use free services at the library

Shop at a discount store

Use free offers at work

Stop buying new clothes

But if you develop the mindset now, the benefits will grow and compound and lead to real dollar savings (or income) when you are on your own and paying for your own meals.

Use free services of the speed limit

Cut your coffee purchase

Use free services to work

Drink more water

Use free services to eat

Avoid convenience stores

Eat breakfast

Use coupons

Avoid fast food

Eat leftovers

Exercise more

Avoid alcohol

Bring your lunch to work or school

Pay bills online through your bank

Five Budgeting Models

ZERO-BASED BUDGETING

- Start with your total income, either actual or expected.
- Then allocate every single dollar to some purpose.
 - Essential expenses such as rent, food and phone are easy.
 - Include savings, debt repayment, insurance and investments.
- Your Net Cash Flow – or Income minus Expenses – will always be \$0.00 because every penny has been assigned to a specific expense or purpose.

Five Budgeting Models

THE ENVELOPE METHOD

- Identify your main expense categories – food, bills, entertainment, rent, and others.
- Pretend that you put money for each category into its own envelope. If it helps, actually put the cash for each category into an envelope.
- The amount that each category has in its envelope is the maximum you can spend for each category during each period.
- You cannot spend more than what's in an envelope. Once an envelope is empty, you cannot spend any more on that category.
- If you spend less than what's in an envelope, you cannot move or loan funds to another envelope.
- If you have money left in any envelopes at the end of the month, put it into savings. Do not carry it over to the next month.

Five Budgeting Models

50 / 30 / 20 METHOD

- This is similar to the Envelope Method but with broader categories.
- Allocate 50% of your income to “needs.”
- Allocate 30% of your income to “wants.”
- Allocate 20% of your income to savings and debt repayment.
- This may be a difficult method while you’re still in school and income is low, but it can be a great method after you graduate to take you through your 20s.

Five Budgeting Models

PAY YOURSELF FIRST

- This is essentially a reverse budget – where the first item you consider is savings.
- Pick a number that you want to save each month – and then as soon as you get paid, move that amount into your savings account or into investments....pay your future self first.
- Then you can apply one of the other methods for the balance of your budget.
 - You could employ a 20 / 50 / 30 budget, where you start with the 20% being moved to savings, then budgeting for needs and wants.
 - You could move all non-savings funds into their own envelopes – then, at the end of the month, with any remaining cash in envelopes, move that to savings. You may end up moving money to savings twice each month – which is great.
 - You could create a zero-based budget on top of your savings. Again, you might have one line-item devoted to savings here, too, and you could end up saving twice.

Five Budgeting Models

THE VALUES-BASED BUDGET

- You first allocate a portion to your essentials: food, rent, phone.
- Then you allocate your income to different values that are important to you: charity, family, friends, health, education, well-being, your future and others.
- This could be coupled with the Envelope, Zero-Based or 50 / 30 / 20 methods, such that your values define the categories. Your values become both “needs” and “wants.”
- Be sure to include “your future” as a value – that’s where you’ll do your saving to help you meet your personal and financial goals.

Five Budgeting Models

Which Budget Model is Best For You?

Only you can answer that.

Budgeting is more of a mental game than a financial process.

You need to select the approach that:

- (1) Gives you the least stress and the most confidence;
- (2) Best aligns with your short- and long-term goals.

In practice, most people combine different models to best suit what they are most comfortable with.

(I personally pay myself first and then use a zero-based approach)
(And then, if I can, I pay myself last, too)

Developing A Budgeting Mindset

Budgeting is more of a mental game than a financial process.

- Think of budgeting as part of a long-term financial plan.
- Think of budgeting in the same way you think of studying, writing or working in the laboratory.
- Recognize your own behavior, habits, priorities and goals. Only you know what is best for you. Choose the budgeting approach that works best for you...and for you only.

Developing A Budgeting Mindset

If you have a spouse, partner, family or others who are affected by your budgeting decisions....

...Talk to them. Make budgeting a team effort.

- Research on personal finance shows that couples feel more empowered and develop a closer, stronger relationship when they share financial goals, decisions and strategies with each other.
- Your pets may be affected by your budgeting decisions. But you don't have to communicate with them. They don't want to be bothered with budgeting decisions. They have other priorities.

Developing A Budgeting Mindset

Some exercises to help you develop a budgeting mindset.

- Track all of your income and expenses – every penny – over an extended period of time (say, 1-2 months).
- Write down the last 15 things you spent money on.
- Write down the next 15 things you want to spend money on.
- Identify your 10 biggest expenses over the past 12 months.
- Predict every dollar of income you will earn over the next 12 months.
- Predict what your income will be for each of the next 5 years.

Developing A Budgeting Mindset

~~Some exercises to help you develop a budgeting mindset~~

What is the purpose of this self-analysis?

To ensure that your spending is aligned with your income.

To ensure that your spending and income are part of your plan.

To ensure your budget is driven by wants & needs, and not driven by impulses.

To be intentional.

Developing A Budgeting Mindset

Some actions that may help you better control your spending:

- Wait 24 hours before making any purchase over a certain dollar amount
 - For me, it's \$100. I don't make any purchase of more than \$100 without thinking about it for 24 hours (except groceries).
- Don't make any purchases on certain days or after a certain time
 - For me it's 9:00pm. I do not spend any money after 9:00pm. Ever.
- Only use cash...because studies have found that spending cash causes us more pain than the abstraction of a credit card or debit card
 - It's also why casinos use similarly abstract poker chips...because we don't feel pain when we lose them.
- Take 10 minutes every Sunday to write down what you're allowed to spend in this week.

Developing A Budgeting Mindset

Some actions that may help you better control your spending:

- Wait
-
- Don't
- Only
- mo
- Take
- in this week.

And then reward yourself.

Turn this into a game.

If you predict you will spend \$200 this week, and you only spend \$150, reward yourself with half the difference.

Take \$25 for happy hour or a night out.

Put the other \$25 into savings or investing.

nt
hours
us
them.

15 Simple Challenges You Can Take to Help You Control Your Financial Future

(and maybe be better prepared for future financial turbulence)

15 Simple Challenges for This Year

CHALLENGE #1

For 1 or 2 months this year, track every penny you spend. Every single penny.

And do this old school – with a pen and paper (or not-so-old school with Excel). Do not use financial software like Quicken or Quickbooks and do not rely on your bank debit or credit card statement. By doing it manually, you will internalize and analyze each penny spent better. Describe the expense, note the amount and make any comments that are relevant. The point is for you to become aware of what you're doing – and then to analyze it. Are you spending more or less than you want? Do you notice any trends. Do you notice any emotion-driven purchases? And now that you've seen this, can you do anything about it – can you change your behavior.

15 Simple Challenges for This Year

CHALLENGE #2

Stop spending money
after a certain time at night.

I'm an early bird, so I don't spend any money after 8pm. Occasionally, I have to make an exception if I'm at dinner with friends, but having this mentality prevents me from making frivolous purchases that do not bring me much joy.

Maybe a daily deadline won't work for you; what about picking 1 day a week where you won't buy anything? Pick a goal that challenges you a bit, that brings you some benefit, but doesn't force you to sacrifice your lifestyle too much.

15 Simple Challenges for This Year

CHALLENGE #3

For any purchases over a certain amount, wait 24 hours before buying. For me, it's \$100.

If I want to buy anything that costs over \$100, I wait at least 24 hours. If I see some shoes online or a flight I want to buy, I wait, think about it and then decide if I need it. Many times I decide I do not. Other times I'm even more excited about it – and then I do it. Forcing myself to wait makes me be more intentional with my purchases, which is a big part of me taking ownership of my money.

Note, the one exception to this is groceries: I need food and I will eat the food, so I do not wait to buy groceries I need.

15 Simple Challenges for This Year

CHALLENGE #4

As soon as you get each paycheck, or on the 1st day of each month, explicitly save \$25.

Maybe that means moving \$25 from your checking or debit account to a savings account. And then do not touch that money. The goal is to get in the habit of paying yourself first (or paying your future self first). And a side benefit is that you will have separate financial accounts, each with separate financial goals.

15 Simple Challenges for This Year

CHALLENGE #5

Make saving a game.

After saving \$25 on the first day of the month, set a goal to save even more during the rest of the month. Maybe you set the goal of saving another \$50. If you manage to save \$150 instead of \$50, celebrate your success by taking the additional \$100 and using some of it to treat yourself. Maybe it's a spa day or a nice dinner – and then take what's leftover from this treat and put it towards savings.

15 Simple Challenges for This Year

CHALLENGE #5 - Alternative

Make saving a game.

Anytime you treat yourself to a purchase over a certain amount, set aside $\frac{1}{2}$ of the amount amount of the purchase to give to charity. For me, it's \$200.

If I buy anything over \$200 – except food or rent – I immediately set aside $\frac{1}{2}$ of the amount to give to charity. I do not donate the money immediately, but I may pool it over several months to be able to give a bigger donation.

15 Simple Challenges for This Year

CHALLENGE #6

Check your credit score.
And study your credit report.

You can get a credit report for free from TransUnion, Equifax or Experian. Make sure what's on the credit report belongs to you. Challenge anything that is wrong. And make a plan to improve your credit score – by cleaning up your credit report or establishing a payment history that will work to your advantage over time.

15 Simple Challenges for This Year

CHALLENGE #6 - Bonus

Check your credit score.
And study your credit report.

For the most part, the only way to improve your credit score is slowly over time. However, there is one hack that might provide a one-time bump to your credit score: request a higher credit limit for all your credit cards. But, of course, do not use this higher limit.

15 Simple Challenges for This Year

CHALLENGE #7

Analyze your insurance expenses at least once a year. Contact 3 different insurance companies and compare pricing.

It's easy to stick with the same company for years. But you may be missing out on the best pricing. It's easy to switch companies, so don't be afraid of it. Or maybe you can use the price comparisons to get a better deal at your current company. As the commercials say, just a few minutes of work can save you hundreds.

15 Simple Challenges for This Year

CHALLENGE #8

Are you expecting a tax refund this year?
If so, get rid of it.

While that may feel good, any financial advisor will tell you that that's bad financial planning. If you're getting a refund, it means you've been giving an interest free loan to the U.S. government for 12-15 months. Why do that? Would you rather have \$1000 a month for 12 months or \$800 a month for those same 13 months plus \$2400 three months later? I would rather have the money sooner – because then I can save it or invest it. So if you are expecting a tax refund this year, go talk to your human resources folks and change your withholding so you pay less in taxes each pay period and get more of your own money with each paycheck.

15 Simple Challenges for This Year

CHALLENGE #8 - Alternative

Are you expecting a tax refund this year?
If so, get rid of it.

Note, the one exception I may make depends on your behavior: if you get that \$2400 refund, are you going to use this to invest or pay off debt? If so, then getting a refund may make sense. But if you view a refund as found money that you can do anything with, get rid of it.

15 Simple Challenges for This Year

CHALLENGE #9

Cancel (at least) one subscription this year.

Look through your recurring subscriptions that automatically charge your credit card or deduct money from your bank account and think about (a) whether you really need that subscription, and (b) whether you would be better off just paying a-la-carte instead of with the subscription.

For me, I had a \$32 monthly car wash subscription; I could wash my car all I wanted every month for \$32. Well, in reality, I only need my car washed once or twice a month – especially as I'm driving less these days. So I got rid of the subscription. I still wash my car at the same place, but now I spend \$10-\$20 a month instead of the fixed \$32 a month. It may not be a huge savings, but it's more about the habit and the ownership of my spending.

15 Simple Challenges for This Year

CHALLENGE #10

For 1 month during the rest of the year, do not eat out.
At all.

If you want to go out for social reasons, eat and drink
before going out. And just enjoy your company.

Remember – there is no ego in financial planning, there is
no shame in financial planning.

15 Simple Challenges for This Year

CHALLENGE #11

For 1 month each year, empty your pantry
and empty your freezer.

Only buy perishable groceries during that
month (and be sure to eat every single penny/ounce of your perishable food).

15 Simple Challenges for This Year

CHALLENGE #12

Open an IRA or Roth IRA account to take a little more control of your retirement.

The difference is that with a Roth IRA, your income is taxed today, while with a Traditional IRA your income is taxed when you withdraw in retirement.

If you are a full-time student, a Roth IRA is probably better for you because you're probably in a low tax bracket today. Even if you're not a student, the Roth may be very attractive to you because your future withdrawals are not subject to either income tax or capital gains tax.

15 Simple Challenges for This Year

CHALLENGE #13

If you have children, set up a 529 College Savings Plan.

The IRS has created lots of tax-preferred investment plans for us which encourage us to pursue certain behaviors – like the retirement plans in the previous challenge. The 529 College Savings Plan is arguably the best-of-the-best of these tax-preferred investment plans.

15 Simple Challenges for This Year

CHALLENGE #14

For every debt payment you have – mortgage, car loan, student loan, credit card – pay more than is required.

Pay an extra \$20 for each payment.

Or round up to the next even \$100 increment.

Or make a one-time, non-recurring extra payment ever other month.

Opening Quiz – Question #2

If you borrow \$10,000 for a student loan, at an interest rate of 5%, and you repay the loan with monthly payments over 10 years, how much total interest will you pay over the life of the loan?

C. \$2,723

If you make a monthly payment of \$106.07, you will pay off this loan in 10 years.

If you make a monthly payment of \$125.00, you will pay off this loan in 8 years, 2 months and will pay a total of \$2,189 in interest over the life of the loan.

15 Simple Challenges for This Year

CHALLENGE #15

Set goals.

Set 5 financial goals for the next year, the next 3 years and the next 5 years.

Goals can be very specific – “I want to save \$1,000 for a vacation” – or rather generic – “I want to begin saving for retirement.” And then begin taking tangible steps towards each goal. Write your goals down, put them on a white board, set up a vision board for them. Be a nerd about it. And get excited about it. But don't stop there; share your goals with others, especially your family. As with resolutions and exercise classes, telling others what you want to do establishes some accountability and possibly gives you a partner work on the goal with. And if you're married, in a long-term partnership or have children, share your goals with them...because your goals innately become their goals, too. By working on the goals together and making progress together, you will all take full ownership of these goals and all of the pride that achieving them gives you.

15 Simple Challenges for This Year

CHALLENGE #15

Set goals.

Set 5 financial goals for the next year, the next 3 years and the next 5 years.

Then sit down with your spouse, partner, parents, children and/or friends and discuss all of these goals. Make sure you are all on the same page about what your goals are. Make sure you are all on the same page about how you are going to achieve each of those goals.

And, sharing your goals with others creates an emotional contract – you are more likely to hold yourself accountable if you know others are aware of your goals.

1. **Set your goals.** What do you want to achieve in life? What financial goals will make this happen?
2. **Analyze your reality.** What is your situation? What is your income? What are your expenses? When can you achieve your goals?
3. **Create your plan.** Focus on the short-term – the next 3-6 months – and the long-term – the next 1, 2, 5 and 10 years.
4. **Execute your plan.** Work to decrease your expenses. and to pay off debt. Work to increase your income and your savings.
5. **Track your progress.** How are you doing? Are you ahead of your goals? Are you behind your goals?
6. **Adjust your plan** to reflect your progress, your new reality and any new goals.
7. **Repeat. Revise. Enjoy.**

Isn't this a lot like what you do with your education planning?

Some Parting Words

- Nothing in finance is free. Do not think some institution is giving you a super deal just because they like you. There will be costs.
- Investment companies work really hard to get your money. They hire psychologists to figure out how to get you addicted to your products. Your money pays for their commercials, buildings, fancy cars and vacation homes.
- I check my bank, savings & investment accounts daily. I do not make changes daily (or even monthly). I just don't want any surprises.

Some Parting Words

- If you ever invest based on personal relationships, be prepared for losses.
- Nobody – NOBODY – can predict the future. And investing is all about predicting the future. Be careful about thinking you can predict the future. Make sure your investments align with your goals.
- Be your own boss. Take control of your money and your investments. Nobody else is going to do it for you. Own your financial future.
